Winnowing Rice for Storage

Submitted by kdad on August 1, 2014

Stella Malangu, a member of the rice winnowing technology design group, Jitambue, in Morogoro, smiles after using the prototype she helped design and build. It generates wind to separate rice from chaff and other unwanted particles and pests before storage. A USAID project in Tanzania is helping these farmers design technologies to improve food security. *Photo by Giselle Aris, Land O'Lakes International Development*
